Description

The link joint in the foot of the Flexible Post enables the cylinder to automatically return to the vertical position in the event of it being hit or run over many times. The base itself is manufactured from recycled material and can be secured by means of epoxy resin adhesive or single bolt fixing.

Typical uses are to separate single direction lines or types of traffic on one carriageway, to demarcate the edge of a route in order to guide vehicles around or through a temporary obstruction, to form a barrier between contra-flow traffic on motorways or dual carriageways etc., all of which can only be crossed by emergency service vehicles.

Models are available in a choice of three heights, 460mm, 760mm or 1000mm.

Features

- Highly visible
- Separates traffic lanes
- Self righting
- Extremely robust
- Fits into basic standard cats eyes
- Comes in two parts (Post & Base)
- Order before 12.00 today for next day delivery (only with express delivery option)
