Description

The Hackney Ferrocast bollard adds security to your landscape whilst maintaining a classy look. These bollards are manufactured from engineering-grade polyurethane, which is cast around a steel core. This makes them virtually inert, and the non-ferrous exterior means the bollard body will never rust, making them particularly suited to saline environments. Ferrocast has a high chip and abrasion resistance, which makes it ideal for heavily trafficked areas and other damage-prone locations.

Options:

The polyurethane bollard can be ordered with or without rings. You can choose between a plastic tape ring or ballotini-painted rings.

Specification:

- Root fixing is the standard product fixing method for ferrocast bollards
- Ferrocast bollards are supplied with a black, two-part polyurethane gloss coating finish as standard
- High chip and abrasion resistance

Size:

Height above ground 970mm x 155mm diameter

Delivery Time:

10 - 15 days
