

# Anti-Ram Street Planter

£960.00

Excl. VAT: £800.00

## Product Images

## Description

---

A constant struggle for architects and developers is balancing security and aesthetics when it comes to street furniture. Our Urban Secure range of street furniture balances both, offering anti-ram security whilst offering an elegant and stylish piece of street furniture. This planter is designed to prevent ram raids and terrorist attacks and offers good protection to banks, ATM machines, jewellers, high-end retailers, government buildings and corporate HQs.

For convenience, the planter is built on-site as a steel frame. Concrete is then poured into the frame to provide a strong anti-ram core. This means no need for forklifts on site to remove heavy concrete furniture.

## Options:

The planter can be ordered in a rectangular or square shape.

## Specification:

- Designed to prevent ram raids and terrorist attacks
- Furniture is built on-site
- Disguised as regular street furniture for style and elegance
- Practical design to improve the street architecture and public use of the surrounding area
- Standard designs include benches, litter bins, recycling units and flower containers
- Rust & Vandal resistant paint finish (Can be supplied in any standard RAL colour)
- Product design is based on that of a high-security Strongroom
- Double-walled steel structure, filled with re-enforced, high-density concrete
- Secured into the ground via multiple anchor rods
